The Session Initiation Protocol (SIP)

only be used with a 200 response if the response is sent as a result of an OPTIONS request.

The information in Table 5-3 should be read in the same way as the information in Table 5-2, with the addition that the indication (c) means that the value of a header is copied from the request to the response. A value of N/A in the Status Code column means that the header should not be included in any response.
